VINYL SIDING + SOFFIT

Mastic siding and soffit products are designed for use in residential and light commercial applications.

FINISH

Mastic vinyl siding and soffit are produced from a PVC compound containing quality color pigments to provide color throughout the thickness of the panel. Close control of color and gloss is maintained to provide for an attractive, weatherable surface. Textured vinyl panels are uniformly embossed to provide an attractive woodgrain pattern.

For cedar-look colors, Kynar 500®* has been formulated into a film, which becomes an integral part of an exclusive layering process. The film finish system exhibits no cracking, blistering, corrosion or loss of adhesion when subjected to extreme test cycles of cold, heat, acid rain and humidity. Test results are available upon request.

*Kynar 500® is a registered trademark of Elf Atochem North America, Inc.

IMPORTANT: FIRE SAFETY INFORMATION

Exterior vinyl building materials require little maintenance for many years. Nevertheless, common sense dictates that builders and suppliers of vinyl products store, handle and install vinyl materials in a manner that avoids damage to the product and/or structure. Owners and installers should take a few simple steps to protect vinyl building materials from fire.

To Home and Building Owners

Rigid vinyl siding is made from organic materials and will melt or burn when exposed to a significant source of flame or heat. Building owners, occupants and outside maintenance personnel should always take normal precautions to keep sources of fire, such as barbecues, and combustible materials, dry leaves, mulch and trash away from vinyl siding.

To Building Trades, Specifiers, Professionals and Do-It-Yourself Installers

When rigid vinyl siding is exposed to significant heat or flames, the vinyl will soften, sag, melt or burn, and may thereby expose material underneath. Care must be exercised when selecting underlayment materials because many underlayment materials are made from organic materials that are combustible. Fire properties of underlayment materials should be ascertained prior to installation. All building materials should be installed in accordance with local, state and federal building code and fire regulations.

For general information about vinyl siding products, contact the Vinyl Siding Institute, 1201 15th St. NW, Suite 220, Washington, DC 20005. Request brochures titled, "Fire Properties" and "What Homeowners Want to Know."

RELEVANT STANDARDS/CODES

Cedar Discovery® shingle siding is a rigid polypropylene siding. Cedar Discovery® shingle siding, tested in compliance to ASTM flame test procedures, meets or exceeds the following properties as required by the national code bodies.

Burn rate	ASTM D635 – 1.15"/minute
Minimum self-ignition temperature	ASTM D1929 – 673F
Minimum flash-ignition temperature	ASTM D1929 – 651F
Flame spread and smoke developed	ASTM E84 – Flame 150, Smoke 710
Windload	ASTM D5206 – 80 psf, 180 mph

NOTE: Cedar Discovery® has been tested per ASTM D5206 standard test method for windload resistance of rigid PVC siding. Check with your local building inspector for windload requirements in your area.

DELIVERY, STORAGE AND HANDLING

Deliver rigid polypropylene siding products to the project site in their original packaging. Store rigid polypropylene products in their original packaging on a flat surface under cover, stacked no more than 12 boxes high. Do not store in a location where temperatures may exceed 130F.

IMPORTANT: FIRE SAFETY INFORMATION

Rigid polypropylene siding is made from organic materials and will melt or burn when exposed to a significant source of flame or heat. Property owners, occupants and maintenance personnel should be familiar with the performance characteristics of underlayment materials. For maximum safety, non-combustible underlayment materials are recommended. Normal precautions to protect rigid polypropylene building materials from sources of fire should be taken. Barbecues and combustible materials, such as dry leaves, mulch and trash, should be kept away from polypropylene siding.

WARRANTY

RAIN REMOVAL SYSTEMS

Mastic rain removal systems are designed for use in residential and light commercial applications.

MANUFACTURING PHYSICALS

All Mastic rain removal systems are made of 3105 aluminum sheet (minimum tensile strength 26,000 psi; minimum yield strength 22,000 psi) or equivalent. Mastic Rain Removal Systems are designed to be free-floating, enabling the gutters to expand and contract with temperature changes while minimizing stress points that cause buckling and leaks.

Mastic gutters, when properly installed, will support a minimum of 50 pounds (22.7 kg) per lineal foot. Six different types of free-floating hanger systems are available in the 5" (127) series, and four hanger systems are available in the 6" (152.4) series. These hanger systems permit the gutter to be used in both new construction and all types of remodeling work. Gutter hangers are nominal .051" – .082" (1.3 – 2.1) thickness, depending on the style specified.

All hanger systems provide a concealed attachment at the front of the gutter, eliminating any exposed protrusions that would detract from the appearance of the gutter. Spikes and ferrules (which restrict the movement of the gutter) and brackets attached to the outside periphery of the gutter not recommended.

Two different types of high-quality, corrosion-resistant Rain Removal Systems are available.

SYSTEM DESCRIPTION

Envoy® 5" is a premium-quality system used in single-family homes and light commercial building applications. Available with a heavier gauge material in both 2" x 3" (51 x 76) and 3" x 4" (76.2 x 101.6) downspout sizes to accommodate most rain removal requirements.

Envoy® 6" works best on large homes where a bigger system will enhance the architecture, or apartments, multi-family complexes and other light commercial buildings. Designed to be a heavy-duty, large-capacity rain removal system, it is available with a 3" x 4" (76 x 102) downspout.

VENTILATION SYSTEMS

Mastic Vent-A-Systems are designed for use in residential and light commercial applications.

MANUFACTURING PHYSICALS

VAR and VAS Mastic Vent-A-System ridges and Vent-A-Strip vents are made of 3105 aluminum sheet (minimum tensile strength 29,000 psi; minimum yield strength 28,000 psi).

VAR and VAS (except mill finish) have an Alumalure® 2000 finish. The finish is a two-coat acrylic applied in a two-phase operation that includes a corrosion-inhibiting primer and a baked-on, high-performance acrylic topcoat. Prior to painting, the metal receives a special cleaning to assure maximum paint adhesion.

SYSTEM DESCRIPTION

Mastic VAR, installed along the ridge of the building, provides the balance necessary for uniform, continuous airflow when used in conjunction with Vent-A-Strip® or proper soffit venting. Vent-A-Ridge® is designed to afford excellent protection against rain and snow. VAR is available in a low-gloss painted model.

VAS provides the vital balance needed for optimum operation used in conjunction with Mastic VAR, and is designed to reduce harmful condensation and excessive temperature buildup in attic areas.

Mastic Vented Soffit may be used instead of VAS when construction conditions do not permit installation of the lineal product.

Ventilation area (net free area per lineal foot)

VAR	18 square inches (116.13)
VAS (model 70)	8.8 square inches (56.77)
VAS (model 79)	9.9 square inches (63.87)

NOTE: All measurements noted in ( ) are in square centimeters (cm^2).

PROTECTION

Direct contact of aluminum products with certain dissimilar materials, or contact with water run-off from dissimilar materials, is likely to result in corrosion. See warranty and installation instructions for more details.

WARRANTY

Mastic Vent-A-Systems are backed by an exclusive V.I.P. Limited Lifetime Warranty. Consult actual product warranty certificates for complete coverage details.
